Licensing and APIs

Standards and Programming

- How does Location.distanceTo work?

```
/**
 * Returns the approximate distance in meters
 * between this location and the given location.
 * Distance is defined using the WGS84 ellipsoid.
 *
 * @param dest the destination location
 * @return the approximate distance in meters
 */
public float distanceTo(Location dest)
```

Standards and Programming

- How does Location.distanceTo work?

```
/**  
 * Returns the approximate distance in meters  
 * between this location and the given location.  
 * Distance is defined using the WGS84 ellipsoid.  
 *  
 * @param dest the destination location  
 * @return the approximate distance in meters  
 */  
public float distanceTo(Location dest)
```

Standards and Programming

- How does Location.distanceTo work?

```
/**  
 * Returns the approximate distance in meters  
 * between this location and the given location.  
 * Distance is defined using the WGS84 ellipsoid.  
 *  
 * @param dest the destination location  
 * @return the approximate distance in meters  
 */  
public float distanceTo(Location dest)
```

Standards and Programming

- How does Location.distanceTo work?
 - Adhering to standards is a good idea

```
/**
 * Returns the approximate distance in meters
 * between this location and the given location.
 * Distance is defined using the WGS84 ellipsoid.
 *
 * @param dest the destination location
 * @return the approximate distance in meters
 */
public float distanceTo(Location dest)
```

Standards and Programming

- How does Location.distanceTo work?
 - Adhering to standards is a good idea
 - World Geodetic System 1984

```
/**  
 * Returns the approximate distance in meters  
 * between this location and the given location.  
 * Distance is defined using the WGS84 ellipsoid.  
 *  
 * @param dest the destination location  
 * @return the approximate distance in meters  
 */  
public float distanceTo(Location dest)
```

APIs and Location in Android

- The Location class from Android system
 - <http://developer.android.com/reference/android/location/Location.html>
 - Very useful in developing apps with Android!
- Using the Location class
 - Read API documentation
 - Create Location objects according to API
 - Call Location methods according to API

Licensing

- Apache 2.0 license for Android Location
 - Allows for reuse and adaptation
- We have adapted code and adopted license
 - You can make changes too!

```
** Copyright (C) 2015 Duke University
*
* (same license as above)
*
* Revised on November 8, 2015 for use by Team Duke Software
* and hereby released with the same Apache 2.0 license
* Adoption consisting of removing all methods and fields that
* are Android specific so that the file compiles and can be used
* outside of Android.
* Also added constructor with Latitude and Longitude.
```
